PickPro WCS

Warehouse Control System v8

Handheld Inventory Tracking System (HITS) Module

Handheld RF Inventory Tracking System (HITS)

This module works very well for tracking floor stock items giving the warehouse manager the ability to track items outside of the stockroom. Originally designed for use in the health care industry this system was developed to track inventory, ordering, and the replenishment of that inventory at each nurse's station.

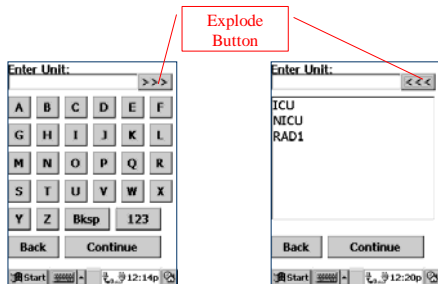

Using the HITS module KanBan, Point of Use, or Floor Stock areas can have the same level of control the warehouse items have.

Select Unit

Allows the User to scan or type their Unit they want to Count. The Unit must be part of the Group that was downloaded to the Handheld. The User may select from a list by hitting the Explode Button.

HITS Handheld Document

HITS makes use of portable handheld terminals to capture the data from the shop floor and communicate that information back to PickPro WCS to generate the pick request for the warehouse operators. All information can be scanned or typed into the terminals.

Each screen is designed for use on a touch type device to facilitate the entry of data.

PickPro™ WCS

Warehouse Control System v8

HITS; Module

HITS utilizes a desk top module to configure and maintain the data specific to the HITS inventory. This method allows ScottTech to maintain a standard base platform that can be upgraded without affecting the HITS programming.
