PickPro™ WCS

Warehouse Control System v8

BulkPro™ Mobile System Module

RF Data Collection Bolt-On Module for PickPro ICS

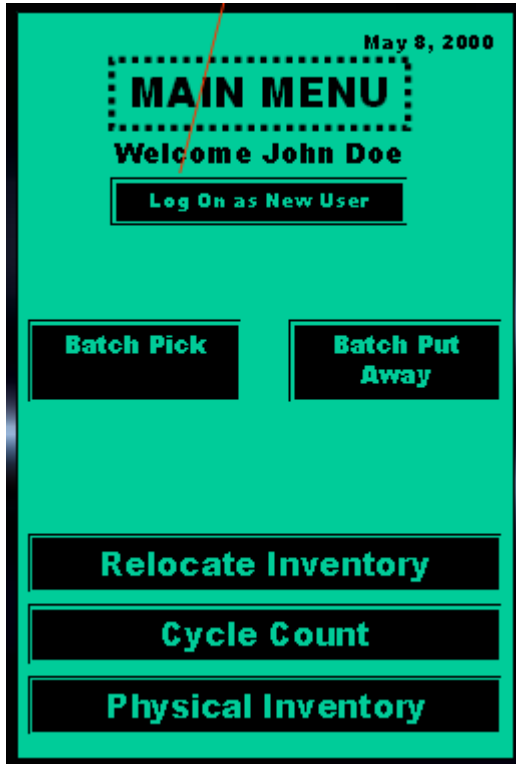

The Handheld module allows an operator to capture data at point of use. Using a portable terminal increase the accuracy and timeliness of the inventory updates.

With scan verification turned on, the operator is 99.99% accurate during the picking or receiving operations. Using a portable terminal gives the bulk picking operator the ability to have real time communication for all transaction.

The WMS PC program is used to establish which orders are ready to be picked. The RF terminal is then used to efficiently direct the picker to the locations throughout the warehouse.

After the products are Received and labeled, the material handlers scan the products in batches in order to make one pass per batch through the warehouse.

As the user is directed by the system through the warehouse, the system requires them to verify the items picked by a simple bar code scan.

As the user is directed by the system through the warehouse, the system requires them to verify the items put away by simply scanning the Part Number and the Location Tag.
